A STEM Student's Salvation

Bloomington, Indiana – 2018 – Many students struggle with Science and Engineering subjects in their early years at University level and many fail and abandon STEM (Science, Technology, Engineering, Mathematics) studies. This is very bad for the economy since there is an ever increasing demand for STEM educated workers. Of course, it is very bad for the students too.

A study by RTI International reveals that nearly a third of students who start pursuing a STEM major transfer out of the field. Why do so many STEM students struggle? For most, it is “The Great Math Barrier.” Worse yet, many students do not even attempt a STEM field of study because they became discouraged in high school by “The Great Math Barrier.”

STEM subjects require a proficiency in Calculus and Differential Equations which are very difficult to achieve with the classical manual techniques often taught in courses today in high school and even most Universities.

Today there are new 21st Century Technologies and Math Tools that overcome this “Great Math Barrier” by essentially automating the solutions of STEM math problems, making STEM Math easy! “Utilizing a modern tool to solve Calculus and Differential Equations problems can mean the difference between failing a STEM subject and getting an A,” states Dr. Craig Hane, teacher and mathematician.

There is a wide variety of math tools and resources available today. One such resource is dedicated to removing the Great Math Barrier for STEM students, StemMathMadeEasy.org/AI. The website includes many free resources which will be invaluable to any STEM student or future STEM student.

Empowering today’s STEM students to utilize technology and modern calculation tools is crucial to success in STEM studies, and ultimately to the United State’s economic success.

About STEM Math Made Easy Inc.

STEM Math Made Easy, Inc. is a 501(c)(3) Non-Profit Organization and approved SAM vendor dedicated to helping STEM students succeed. STEM Math Made Easy offers advanced online math

curriculums and has developed the revolutionary SupraComputer, which will change the way students learn and practice math at all levels. For more information, please visit: www.StemMathMadeEasy.org and www.StemMathMadeEasy.com.
